

MiniBooNE Report

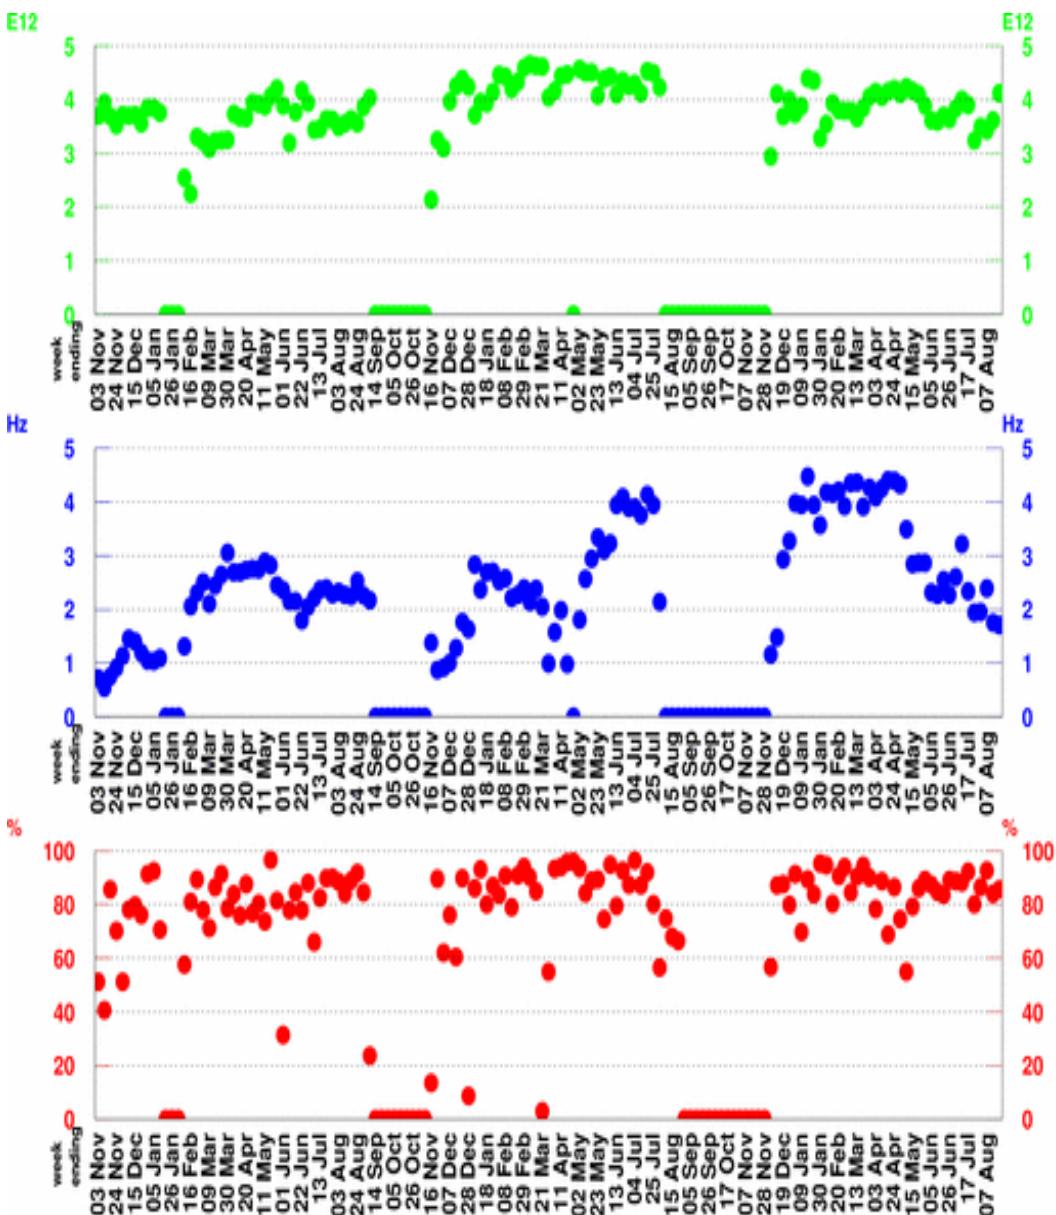

Richard Van de Water
Los Alamos National Lab
for the MiniBooNE collaboration

22 AUGUST 2005

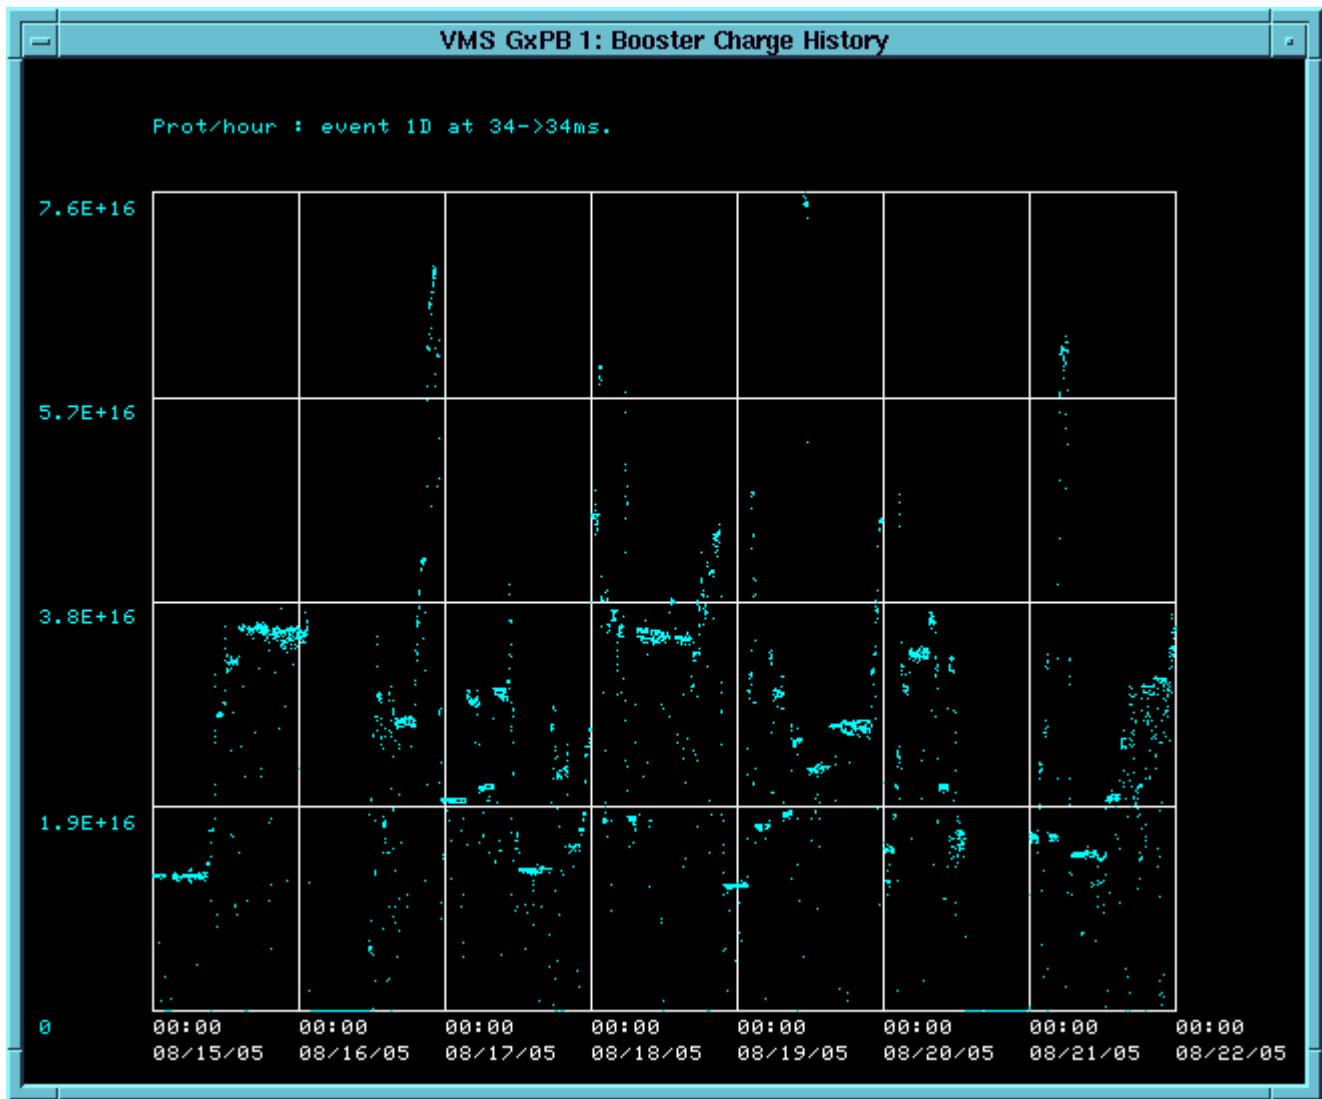

15 – 21 August

15 – 21 August

MiniBooNE Weekly Proton/Hr Summary

Would like to stay around ~4E16 p/hr.

MiniBooNE Uptime 85%

- MI weekend repairs and F-sector access main source of downtime.
- Detector running well, ~100% livetime. Saturday T-storm knocked out RWM discriminator, promptly repaired.
- New tune for increased batch intensity seems to be helping proton rate.
- MB collaboration meeting this week, steady progress on analysis.
